RAABIYAH ADAM

Email: raabiyah@gmail.com
Contact number: +971502586714
LinkedIn: https://www.linkedin.com/in/raabiyah-adam
Nationality: South African

Technical Data & AI Developer with a strong background in statistics and hands-on experience building automation, document processing, and data pipeline solutions using Python, SQL, and API-based integrations.

Experience developing automation workflows, working with structured and unstructured data, and building tools that support reporting, document processing, and internal business systems.

Comfortable working in fast-paced environments, delivering reliable solutions with strong attention to detail, clear communication, and a focus on practical, production-ready implementations.

CORE COMPETENCIES

- AI Agent Design & Automation
- Semantic Search & RAG Pipelines
- Fast Learning & Tool Adoption
- Predictive Modelling & Data Analysis
- Dashboarding & Reporting
- End-to-end Project Execution
- Cross-functional Collaboration
- Creative Problem-solving

TECHNICAL SKILLS & TOOLS (SNAPSHOT)

Programming & Scripting: Python, SQL, R, Excel

Data Processing & Automation: Data transformation, automation workflows, APIs, JSON, structured data, document processing

Backend & Integration: FastAPI, REST APIs, Docker, system integration, data pipelines

AI / Advanced Tools: OpenAI API, LangChain, RAG, FAISS, Azure AI Document Intelligence

Data Visualisation & Reporting: Power BI, Tableau, Google Analytics

RELEVANT EXPERIENCE

Data Analyst (Contract), Azakaw – Digital Risk & Compliance Platform | July 2024-July 2025

Worked on data automation, document processing, and AI-assisted tools to improve operational efficiency and support compliance and onboarding workflows across internal systems.

- Developed Python-based automation tools to process, clean, and transform structured and unstructured data from multiple sources.
- Built document automation and onboarding workflows to reduce manual review and improve processing speed.

- Created semantic search and document retrieval tools using vector databases and API integrations.
- Developed backend services and APIs using FastAPI to connect data pipelines with internal systems.
- Built automated reporting workflows and dashboards using Power BI and SQL-based data sources.
- Worked with APIs, JSON data, and database queries to support system integrations and internal tools.
- Collaborated with technical and business teams to deliver reliable solutions in a deadline-driven environment.

Pricing Analyst, Inventory & Web Manager, Coralle Concept – Online Retailer | Apr 2020–Dec 2023

Responsible for managing e-commerce operations, inventory data, reporting, and website administration for an online retail business.

- Built and maintained Shopify-based e-commerce platform and integrated payment and delivery applications.
- Managed inventory data and implemented processes to track stock movement and purchasing trends.
- Analysed sales and customer behaviour using built-in analytics tools and reporting dashboards.
- Prepared reports to support purchasing decisions and operational planning.
- Worked with website integrations and online tools to improve user experience and workflow efficiency.

EDUCATION & TRAINING

DEGREES

Masters: Applied Data Science & AI	Open Institute of Technology	Current
Hons (BCom): Statistics	University of South Africa	2012-2013
BCom: Econometrics	University of Pretoria	2005-2010

CERTIFICATES

The Complete Agentic AI Engineering Course Udemy 2025

Practical exploration of autonomous AI Agents, planning, ReAct and LangGraph

Tools learned: LangChain, LangGraph, CrewAI, OpenAI, Python, Prompt chaining

Microsoft Applied Skills: Azure AI Document Intelligence Udemy 2025

Hands-on certification in intelligent document processing using Azure AI services.

Tools learned: Azure AI Studio, REST API's , Form Recognizer, Postman

Google Data Analytics Professional Certificate Coursera 2024

Covered the full data analytics process including data cleaning, analysis, and visualisation.

Tools learned: Excel, SQL, R Tableau, Google Sheets, Google Data Studio

Data Science in Python University of Cape Town (GetSmarter) 2022

Focused on data manipulation, statistics and predictive modelling in Python.

Machine learning techniques learnt: Tree-based Methods, Decision Trees, K-means Clustering, Hierarchical Clustering & Neural Networks.

Tools learned: Python (pandas, NumPy, Matplotlib, scikit-lean), Jupyter, GitHub
